HOW TO MAKE A SKETCH OF THE PROPOSED SHELTER-BELT

NORMAN ROSS, *Superintendent of Forest Nursery Station, Indian Head, Sask.*

It has been found that, in cases where an inspector has not been able to visit an applicant, and, in consequent, desires the applicant himself to furnish a sketch of the proposed tree-belt, the information given by the majority of such applicants in regard to the proposed tree-belt is not sufficient nor clear enough to enable the Forest Service to figure out the required number of trees. In many instances the full length and breadth of the land prepared for planting are not given, and the position and distance of the permanent buildings from the proposed shelter-belt are frequently omitted. When the above information is not correctly supplied by the applicant it causes a considerable amount of correspondence and delay which frequently results in disappointment to the applicant.

The sketch given below is NOT A PLAN TO BE FOLLOWED, but is merely to show how measurements may best be indicated.

IMPORTANT—YOUR SKETCH MUST SHOW:

- (1) The measurements, both length and width, of all ground ready for planting.
- (2) The distance between the inside of the proposed belt and any permanent buildings.
- (3) The position of any existing plantations or belts of trees.

Give ALL measurements in YARDS, not in rods or feet.

IF THESE INSTRUCTIONS ARE NOT FOLLOWED IT MAY MEAN
DELAY AND FINALLY DISAPPOINTMENT IN NOT RECEIVING
TREES.
